Customer Problem Statement

The problem statements below are written from the point of view of the people who work with employee records. They focus on the difficulty experienced during spreadsheet-based employee data updates rather than describing the solution itself.

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	an HR or ServiceNow administrator managing employee records	import employee information received in Excel and keep the ServiceNow records current	manual entry and repeated imports can create duplicate or inconsistent records	the spreadsheet data is received separately from the target employee table and existing records must be identified during import	concerned about data accuracy and the time spent checking records
PS-2	an administrator responsible for maintaining employee data	quickly verify whether new employee records were added and existing records were updated correctly	it is difficult to monitor the results of repeated imports without a clear view of the data and import outcome	import results need to be checked against the employee records and summarized for easier review	uncertain about whether the imported data is complete, current and free from unnecessary duplicates

Problem Statement Summary

The common issue across both statements is the need for a reliable and manageable process for moving employee data from spreadsheets into ServiceNow. The main concerns are manual effort, duplicate records, inconsistent updates, and difficulty in checking import results.

Problem Scope

- Input: structured employee information supplied through an Excel spreadsheet.
- Core employee fields: Employee ID, Employee Name, Email, Department and Location.
- Primary users: HR or ServiceNow administrators responsible for employee-data maintenance.
- Main operational concern: accurate insertion and updating of employee records without unnecessary duplicates.
- Verification need: administrators should be able to review the resulting employee records and summarized information.

Source basis: the supplied Customer Problem Statement template and the completed ServiceNow project scope.
