

PROJECT DEVELOPMENT PHASE

Performance Testing

1. Purpose

This document defines the performance checks relevant to the implemented ServiceNow employee-data import workflow. The focus is on import processing, transformation, record matching and report/dashboard usability rather than on enterprise-scale load testing. The project material does not contain measured response-time or throughput results, so this document separates test objectives and acceptance criteria from results that would require an actual timed test.

2. Scope

In scope: Excel employee-data upload, Import Set staging, Transform Map execution, Coalesce matching by Employee ID, target-table record creation/update, report generation and dashboard loading. Out of scope: external integrations, production-scale concurrency, load balancing and infrastructure benchmarking.

3. Performance Test Scenarios

4. Performance Measures to Capture

File size and number of employee rows used for the test.

Time to load the spreadsheet into the Import Set.

Time taken by the Transform Map to complete.

Number of rows successfully inserted and updated.

Number of rejected or errored rows, if any.

Report and dashboard load time when measured.

Any visible processing delay, timeout, or transformation error.

5. Performance Acceptance Criteria

6. Test Evidence to Attach in the GitHub Repository

Screenshot of the Load Data / Import Set result.

Screenshot of the Transform Map run/result.

Screenshot showing the target Employee Test records after transformation.

Screenshot showing the Employees by Department and Employees by Location reports.

Screenshot of the Employee Analytics Dashboard.

If the team performs timed tests later, add a small results table containing file size, row count, elapsed time and outcome.

7. Conclusion

The performance-testing document provides a project-appropriate test scope without inventing benchmark numbers. For the completed academic implementation, functional execution and data-integrity checks are the primary evidence. Timed response and throughput figures should only be added after the team records them from an actual ServiceNow test run.

Date	03 October 2026
Team ID	SWTID-2026-8740
Project Name	Employee Data Management using ServiceNow Import Sets and Transform Maps
Document Type	Performance Testing

ID	Test Scenario	Objective	Acceptance Criteria	Result / Evidence
PT-01	Small employee spreadsheet import	Verify that a normal project-sized Excel file can be loaded and transformed without processing errors.	Import completes and transformed records are available in Employee Test.	Record actual elapsed time during execution; not provided in project material.
PT-02	Repeated import with existing Employee IDs	Verify that Coalesce matching does not create unnecessary duplicate employee records when the same employees are imported again.	Existing Employee IDs are matched and records are updated when source values change.	Record elapsed transform time and target-record count; not provided.

ID	Test Scenario	Objective	Acceptance Criteria	Result / Evidence
PT-03	Repeated import with unchanged data	Verify that importing unchanged employee data does not result in unnecessary record changes.	Existing records remain without duplicate creation and no unnecessary data change is introduced.	Record elapsed transform time; not provided.
PT-04	Department and location reports	Verify that reports can be opened and rendered after employee data is imported.	Report loads and displays the expected employee information.	Record report load time if measured; not provided.
PT-05	Employee Analytics Dashboard	Verify that the dashboard containing the employee reports can be opened after transformation.	Dashboard opens and displays the configured reports.	Record dashboard load time if measured; not provided.
PT-06	Larger data-volume check	Observe how import and transformation behave with a larger spreadsheet than the normal project sample.	No import failure or unexpected duplicate creation; document elapsed time and any processing issue.	Requires an actual larger-file test; no measured result is claimed here.

Area	Acceptance Criterion
Import processing	The configured employee spreadsheet should load into the Import Set without an import failure.
Transformation	The Transform Map should complete without unexpected transformation errors.
Data integrity	Performance testing must not compromise the insert/update behavior controlled by Coalesce.
Reporting	Configured reports should remain usable after the employee data is transformed.
Dashboard	The Employee Analytics Dashboard should open and display its configured reports.
Scalability evidence	Any claim about larger-scale performance must be supported by an actual measured test; the academic project does not assume production-scale capacity.
