

PROJECT DEVELOPMENT PHASE

User Acceptance Testing – Functional Specification Document

1. Document Purpose

This User Acceptance Testing (UAT) FSD defines the business-level scenarios used to verify that the completed ServiceNow employee-data import solution meets its intended workflow. The document focuses on what an administrator should be able to accomplish rather than on internal implementation details.

2. Solution Under Test

The solution accepts employee information from Excel, stages the incoming records through an Import Set, maps the source fields using a Transform Map, uses Employee ID as the Coalesce matching value, stores the transformed records in the Employee Test table, and provides reports and an Employee Analytics Dashboard for review.

3. User Roles

4. UAT Entry Criteria

The Employee Test target table and required employee fields are available.

The Employee Import staging table is available.

The Transform Map is configured between the import and target tables.

Employee ID is configured as the matching value for Coalesce.

Reports and the Employee Analytics Dashboard are available for review.

Representative employee spreadsheet data is ready for testing.

5. UAT Test Cases

6. Acceptance Summary

The documented UAT scenarios cover the core business flow: importing new employee data, updating existing records, avoiding unnecessary duplicates on repeated unchanged imports, confirming field mapping, and reviewing the resulting employee information through reports and the dashboard.

7. Defect / Observation Log

8. UAT Sign-off

9. Evidence Checklist

Import Set / Load Data screenshot.

Transform Map configuration or transform result screenshot.

Employee Test table showing newly inserted records.

Employee Test table showing an existing record updated through Employee ID matching.

Evidence of the repeated unchanged import test.

Employees by Department report.

Employees by Location report.

Employee List Report.

Employee Analytics Dashboard.

10. Scope Note

The UAT status statements above are based on the completed project workflow documented by the team. They should not be interpreted as independent production acceptance or as evidence of a live organizational deployment. Final sign-off fields should be completed by the actual reviewer.

Date	03 October 2026
Team ID	SWTID-2026-8740
Project Name	Employee Data Management using ServiceNow Import Sets and Transform Maps
Document Type	User Acceptance Testing – Functional Specification Document

Role	UAT Responsibility
HR / ServiceNow Administrator	Loads employee spreadsheets, runs the transformation, verifies employee records and reviews reports/dashboard.

Role	UAT Responsibility
Project Reviewer / Business User	Checks whether the resulting employee information is understandable and supports the intended review workflow.

Test ID	Scenario	Test Action	Expected Result	Status / Basis	Executed By
UAT-01	Import new employee records	Load a spreadsheet containing Employee IDs that are not already present.	New employee records are created in Employee Test with the mapped field values.	Pass – documented project workflow includes insertion of new employee records.	Administrator
UAT-02	Update an existing employee	Load a spreadsheet containing an existing Employee ID with a changed employee detail.	The existing employee record is updated rather than a second record being created.	Pass – documented project workflow verifies update behavior through Coalesce.	Administrator
UAT-03	Repeat unchanged import	Load the same employee data again without changing the source values.	No unnecessary duplicate employee record is created and unchanged data does not produce an unnecessary update.	Pass – documented project workflow includes unchanged/repeated import verification.	Administrator
UAT-04	Verify employee field mapping	Compare source spreadsheet fields with the resulting Employee Test record.	Employee ID, Employee Name, Email, Department and Location appear in the corresponding target fields.	Pass – field mapping is part of the implemented Transform Map workflow.	Administrator
UAT-05	View department report	Open the Employees by Department report after transformation.	The report presents the employee distribution by department.	Pass – report is part of the completed project.	Business User
UAT-06	View location report	Open the Employees by Location report after transformation.	The report presents the employee distribution by location.	Pass – report is part of the completed project.	Business User
UAT-07	View employee list report	Open the Employee List Report.	The report displays the employee records available in the target table.	Pass – report is part of the completed project.	Business User
UAT-08	View analytics dashboard	Open the Employee Analytics Dashboard.	The dashboard displays the configured employee reports in one view.	Pass – dashboard is part of the completed project.	Business User

Defect ID	Description	Severity	Status	Remarks
DEF-001	No defect recorded in the supplied project documentation.	—	No defect reported	Update this table if the team identifies a defect during final UAT execution.

Approval Role	Name	Signature / Approval	Date
Project Team Representative	To be completed	To be completed	To be completed
Business / Faculty Reviewer	To be completed	To be completed	To be completed
